Trinational Summer School

"Experimenting with transdisciplinary research - using the example of climate adaptation in cities and municipalities"

25-29 September 2023 at the Studienhaus Wiesneck near Freiburg (Germany)

What is it about?

The trinational summer school offers **20 PhD students from various disciplines** the opportunity to learn **interactively** about **innovative formats and methods of transdisciplinary research**.

The sustainable transformation of our society doesn't only require the production of knowledge and the development of scientific solutions. In order to implement scientific findings successfully, it is necessary to deal with the social framework conditions. This requires close **cooperation between science and society**. The aim of **transdisciplinary research** is to design and structure this cooperation in a scientific and practice-oriented way.

The summer school is an opportunity to discover and experience different transdisciplinary formats and methods with a **case study on climate adaptation in a city district of Emmendingen, north of Freiburg in Germany**. As the trinational Upper Rhine region is particularly affected by heat and even higher temperatures and more frequent and longer heat periods are expected in the future, cities and municipalities are called upon to quickly develop adaptation strategies and measures. The PhD students will tackle this issue in a **concrete manner** and **in direct cooperation with the city administration of Emmendingen**.

Who can participate?

20 PhD students from the Eucor universities (University of Basel, Freiburg, Haute-Alsace, Strasbourg, and Karlsruhe Institute of Technology) **from various disciplines** who are interested in transdisciplinary research. **No previous knowledge is required**. The main working language will be **English**.

Information and application

More information on the programme and the application procedure **from 15 May 2023** on the **Eucor website**: <https://www.eucor-uni.org>
