

## Training

### GMP Training

**Date:** Monday-Friday 19.-23.02.2024 (9:00 – 16:30)

**Location:** online

**Registration:** kontakt@gmp-kurs.de

Many companies expect knowledge of Good Manufacturing Practice from "life science" students. Especially in the pharmaceutical industrie it is a relevant requirement.

Unfortunately, this knowledge is rarely taught at university.

Therefore we offer an online-course for beginners and advanced students to get GMP knowledge.

Speakers from different industries and companies are making this course up to date and practical.

Also, it is a networking event, as companies offer a business presentation and give you the chance to get in direct contact with them.

Why you should enroll:

- + direct contact to well known companies out of the Pharmaceutical-, Chemical- und Biotech-industry.
- + Speakers out of the industrie that makes it a hands-on course and not theory-only
- + You receive an approved certificate after you passed the final exam
- + Not only GMP knowledge like quality control, production and quality management is part of the course. Also extended knowledge in GxP (clinical, laboratoy etc.) will be provided.
- + You can distinguish yourself from other candidates during an application process.
- + GMP Academy is a certified from TÜV as an education provider in the Life Science industry
