

Event

Informatica femminile

Date: 30.07.- 03.08.2024

Location: Campus of the Technical Faculty

Registration: <https://scientifica.de/en/bildungsangebote/informatica-feminale-bw/ueber-die-informatica/>

A Place for Experimentation

The informatica femminile Baden-Württemberg brings together female students and scientists from all computer science and computer science-related courses of study, as well as female IT experts from practice. It is a place of experimentation to bring new impulses to the study of computer science.

The informatica femminile Baden-Württemberg enables interested women to gain further qualifications in an atmosphere conducive to learning among women only. The first informatica femminile Baden-Württemberg took place in 2001, modelled on the Bremen informatica femminile.

The Course Offers

Numerous teaching offers are submitted to the Call for Lectures by interested women experts from science and industry. The programme committee evaluates the offers and, if necessary, specifically recruits further teaching. Teaching in the summer programme covers the entire field of computer science: theoretical, practical, technical and applied computer science, computer science and society, and events that address interdisciplinary topics. Courses on management, soft skills and career planning complete the programme.

For Female Students and Female IT Professionals

Courses on basic skills are in high demand, especially from female undergraduate students. At the same time, courses are offered to strengthen the social skills of female students, as well as topics in women's and gender studies. Women engineers who want to continue their education in the context of lifelong learning are also welcome.

The Lecturers

Women professionals use the opportunity to vary their existing teaching concepts or to bring their practical knowledge into university teaching and to further qualify themselves on the way to a professorship. Student participants make creative suggestions for desired teaching programmes, some of which they even offer in the summer programme of the following years or in their home university itself.

Last but not least, female lecturers from industry have the opportunity to practise the teaching situation in a university context and make a university career more concrete. Likewise, interdisciplinary teams of female lecturers have emerged and are trying out new types of events.

The Organisers

The summer school informatica femminile Baden-Württemberg is a project of the Ministry of Science, Research and the Arts Baden-Württemberg. The Netzwerk F.I.T is organising the event as project executive agency under the direction of Prof. Dr. Ulrike Busolt. The project is part of the state initiative "Women in MINT Professions in Business, Science and Research".
